

Release note

Platform information on the Sequence Work page

Release date: 13 August 2013

Depending on your particular workflow you might have the situation where there are many Titles in Sequence with the same name, but for **different** platforms; you could always filter for a specific platform, but now the Work page shows the tags for each Title so you can see at a glance which platform a Title is intended for.

This note describes what has changed in full, and as usual you can contact **support** or your technical account manager for further clarification.

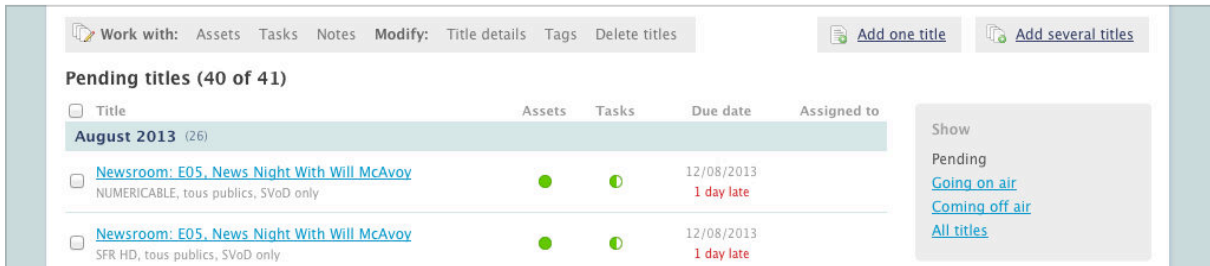

BeBanjo reference(s)

Application	Issue	Title
sequence	239	Show platform information on the Work page

The title work list shows all of the tags for each Title underneath its name; the order of the tags is the same order as the **tag groups**, and the position of the tag inside a group. If the list of tags is too long to fit into a single line it is truncated; you can see all of the tags by hovering the mouse cursor over the tags. The other changes in each list are described below.

Pending

The **"Due date"** and **"Status"** columns have been merged into a single Due date column, and the status is shown under the due date.

Work with: Assets Tasks Notes **Modify:** Title details Tags Delete titles Add one title Add several titles
