

Release note

Metadata for Schedule Entries

Release date: 8 September 2014

Behind the scenes at BeBanjo HQ, our Metadata SDK (we use that to build Metadata Exporters) has long supported metadata for Schedule Entries (aka Exhibition Windows) but this metadata wasn't accessible in the Movida user interface, until now!

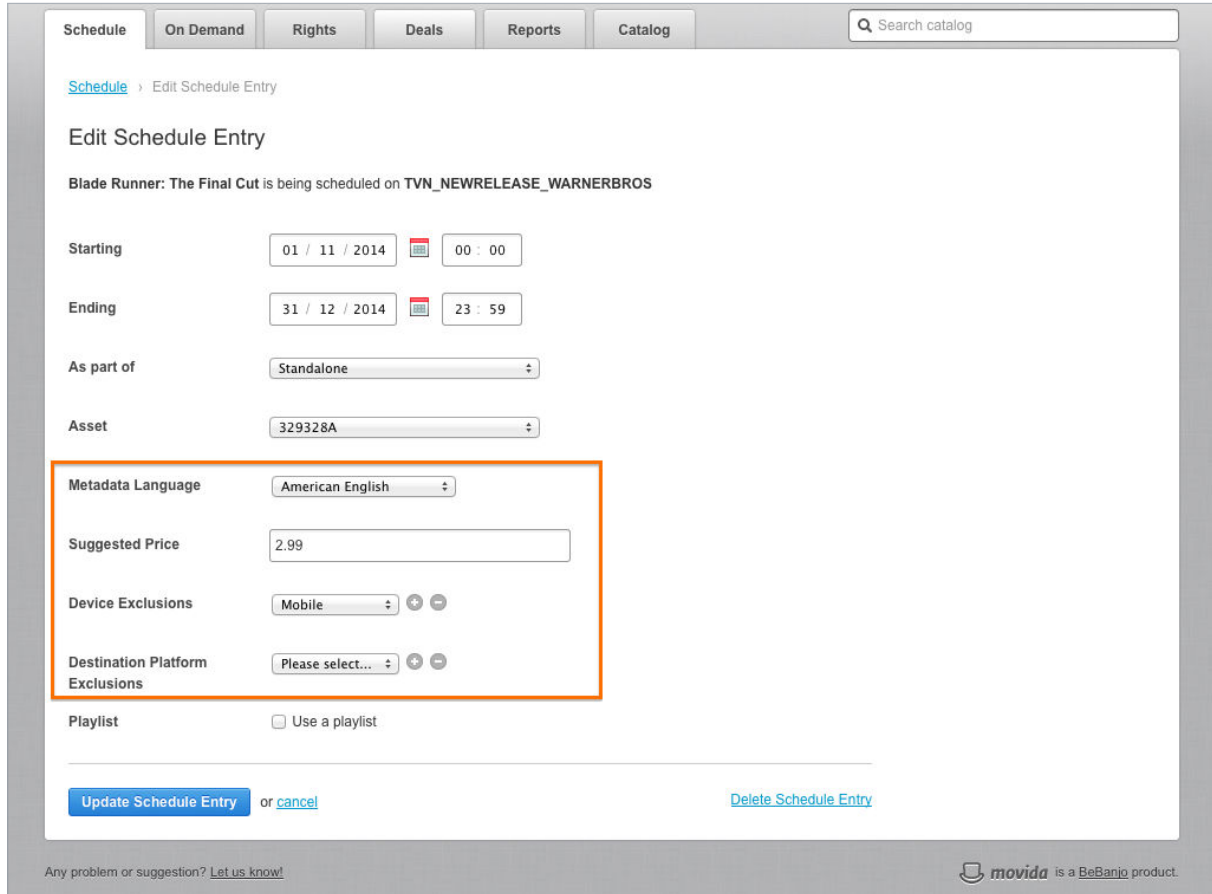

This note describes what has changed in full, and as usual you can contact [support](#) or your technical account manager for further clarification.

BeBanjo reference(s)

Schedule Entry Metadata

When you edit a Schedule Entry (i.e. the combination of a Title, Asset, Platform, and Exhibition Window dates) you can now update the metadata attributes that are defined for Schedule Entries in your Company within Movida. Here's an example:

Here you can see that four metadata attributes have been made available for Schedule Entries: **Metadata Language**, **Suggested Price**, **Device Exclusions**, and **Destination Platform Exclusions**. Remember, metadata attributes are entirely customisable based on the requirements of your business.

The Schedule Entry metadata attributes defined for your Company in Movida are available in the Schedule Export and Import Titles features. The **metadata** resource of a Schedule Entry can be created, updated, and deleted using the Movida Application Programming Interface (API) as described in its **documentation**. Robots love that sort of thing.
