

Release note

Improvements to Sequence and Movida integration

Release date: 11 September 2014

We've made a small but very useful change to Sequence that improves its integration with Movida, hopefully this will make your day job that little bit easier!

This release note describes what has changed in full, and as usual you can contact [support](#) or your technical account manager for further clarification.

BeBanjo reference(s)

Application	Issue	Title
sequence	264	Open Title or Schedule Entry in Movida from a job

There and back again...

For those customers who use Movida and Sequence it has always been possible to jump over to Sequence for a Schedule Entry by clicking the **Show in Sequence** link to show its workflow tasks.

However, if you're working on a Job in Sequence and need to edit its Schedule Entry or find out more details about the Title that wasn't very easy to achieve - until now!

When a Job in Sequence is linked to a Title in Movida you'll now see a new **catalog** link, and the **scheduling windows** date range is now a link:

The screenshot shows the 'WORK' tab in the Sequence application. The main content area displays the title 'Bad Neighbours_BBFC' with three links: 'catalog', 'edit', and 'delete'. Below this, a metadata table lists the following details:

Licensor	Universal Pictures
Scheduling window	September 8, 2014 - January 7, 2015
Due date	September 8, 2014 (On Air)
Status	went on air on September 10, 2014
Tags	VOSP2 - Film, BT complete
Ok?	<input checked="" type="checkbox"/>

On the right side of the interface, there are several notification boxes: 'Report a problem', 'Platform files are ready in PreQC\Awaiting Orders FILM.' (with 'edit' and 'delete' links), and 'Add another note'.

Clicking the **catalog** link will show the Title in the Catalog, and clicking the **scheduling window** dates will show the Schedule Entry in the Schedule page. Easy!
