

Release note

Asset History

Release date: 8 July 2013

When problems occur downstream of Movidia with the processing of Assets, e.g. for scheduled Titles, it can be useful to know exactly *when* the Asset details were changed and *who* changed them.

Movidia has been changed so that details (including the username, date, and time) of all changes to Assets are recorded in the Activity page (in the "Catalog" section) and in the "Activity" page for a Title in the Catalog.

This note describes what has changed in full, and as usual you can contact [support](#) or your technical account manager for further clarification.
