

Release note

Movida External ID in Sequence

Release date: 24 July 2013

A title in Movida can have an External ID; this is normally used to store the unique identifier from the content provider. It is now possible to search in Sequence for titles, sent from Movida, using the External ID of the title in Movida.

This note describes what has changed in full, and as usual you can contact [support](#) or your technical account manager for further clarification.

BeBanjo reference(s)

Application	Issue	Title
sequence	237	Search for jobs by Movida external ID

If you use a Movida External ID in the search field of either the Overview or Work pages then the search results in the Work page will show **all** titles that have that External ID. When you click through to the workflow page for a title you'll see that the External ID is clearly shown:

The screenshot shows the 'WORK' tab in the Sequence interface. The title is 'Game of Thrones : Le trône de fer: E01, Le nord se souvient'. The External ID is LETRONE0201W0070603. The Licensor is HBO. The Scheduling window is December 2, 2012 - December 31, 2012. The Due date is December 2, 2012. The Status is 'went on air on December 2, 2012'. The Tags are 'CANAL, déc. -12'. There are buttons for 'Report a problem' and 'Add a note'. A red warning message says 'Title should be offline'. Below, there is an 'Assets Received' section with a table showing one asset: H000084509. There are links for 'Anything late? Notify Provider' and 'Asset unusable? Request new asset'.

External ID	LETRONE0201W0070603
Licensor	HBO
Scheduling window	December 2, 2012 - December 31, 2012
Due date	December 2, 2012
Status	went on air on December 2, 2012
Tags	CANAL, déc. -12

Assets Received [edit, add or delete](#)

<input checked="" type="checkbox"/> H000084509	Anything late? Notify Provider
	Asset unusable? Request new asset

If the External ID for a title is set in Movida *after* its Schedulings have been sent to Sequence, then Movida will update Sequence with the External ID information.

We've also improved the layout of the workflow page, clearly separating and labelling all of the important details for the title; if a title doesn't have an External ID then the field isn't displayed.
