

Release note

Improvements for boolean metadata attributes

Release date: 1 September 2014

True or False? Yes or No? Stick or Twist? It's these little things that keep our design team awake at night, and to help them sleep better we've made a small but useful change to how **boolean** metadata attributes are displayed in Movida.

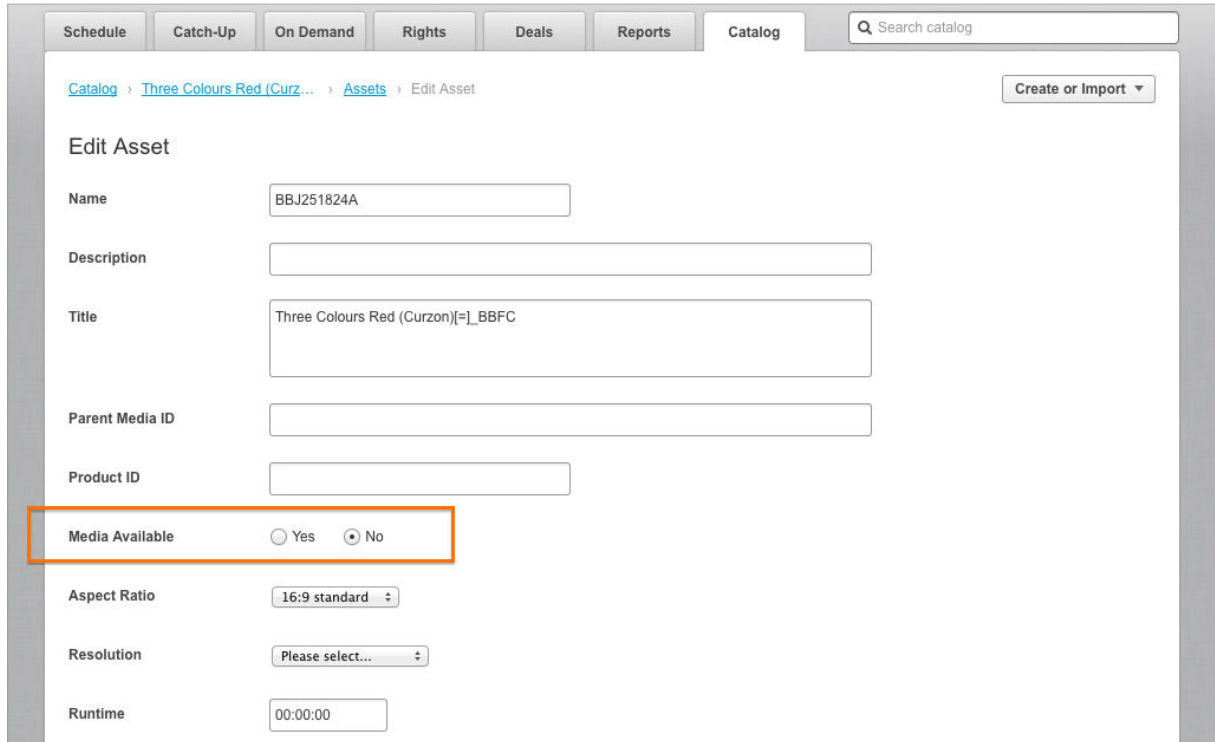

This note describes what has changed in full, and as usual you can contact [support](#) or your technical account manager for further clarification.

movida	2541	Fix metadata boolean

Boolean metadata attributes

Boolean metadata attributes have one of two possible values: **true** or **false**. Previously this type of metadata attribute was displayed as a checkbox, but now they're displayed as radio buttons labeled **Yes** or **No**. Here's an example:

The screenshot shows the 'Edit Asset' interface for an asset named 'BBJ251824A'. The 'Media Available' field is highlighted with an orange box and contains two radio buttons: 'Yes' (unselected) and 'No' (selected). Other fields include Name, Description, Title, Parent Media ID, Product ID, Aspect Ratio (16:9 standard), Resolution (Please select...), and Runtime (00:00:00).

This provides for greater visual consistency with the other types of metadata attributes and makes it clearer to a user what their selection means.
