

Release note

Improvements to Notes and Problems in Sequence

Release date: 29 September 2014

We've made another small but very useful change to Sequence, this time to improve how Notes and Problems are handled.

This release note describes what has changed in full, and as usual you can contact [support](#) or your technical account manager for further clarification.

Application	Issue	Title
sequence	495	Show URLs as clickable hyperlinks in notes and problems

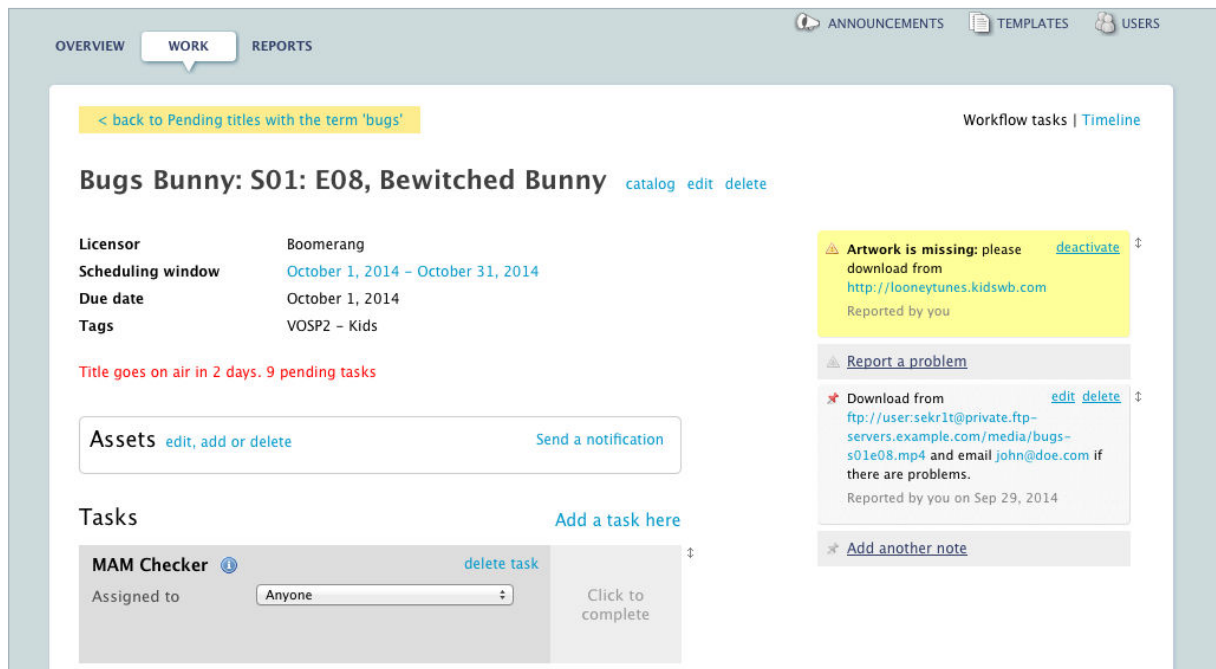

Across the Universal Resource Identifier...

Notes and Problems in Sequence are very useful for keeping your whole team on the same page and making sure information is shared effectively.

We noticed that many customers use these features, particularly Notes, to store instructions about where to download content from (e.g. FTP servers, web sites, etc.).

Sequence will now automatically convert those obscure strings of characters into something a little more useful, a **hyperlink!**

Here's an example:

The screenshot shows the 'WORK' tab in the Sequence interface. The main content area displays a task titled 'Bugs Bunny: S01: E08, Bewitched Bunny' with options to 'catalog', 'edit', or 'delete'. Below the title, the task details are listed: Licensor (Boomerang), Scheduling window (October 1, 2014 - October 31, 2014), Due date (October 1, 2014), and Tags (VOSP2 - Kids). A red notification states 'Title goes on air in 2 days. 9 pending tasks'. There are two main sections: 'Assets' with 'edit, add or delete' and 'Send a notification' buttons, and 'Tasks' with 'Add a task here' and a 'MAM Checker' section. The 'MAM Checker' section shows 'Assigned to' as 'Anyone' and a 'Click to complete' button. On the right side, there are two expandable panels: 'Artwork is missing: please download from http://looneytunes.kidswb.com' with a 'deactivate' link, and 'Download from ftp://user.sekr1t@private.ftp-servers.example.com/media/bugs-s01e08.mp4 and email john@doe.com if there are problems.' with 'edit' and 'delete' links. Both panels are reported by the user on Sep 29, 2014. There is also a 'Report a problem' button and an 'Add another note' button.

You can see that the Note contains a link to the media file on an FTP server (and the contact email address at the content provider), and the Problem contains a link to a webpage where artwork can be downloaded from. *Nifty.*
