

Release note

Logout: Once More, with Feeling!

Release date: 26 November 2014

BeBanjo ID is our authentication and authorisation system that you use to access to all BeBanjo applications. To improve security and provide a more consistent user experience, we've improved the logout feature.

This note describes what has changed in full, and as usual you can contact [support](#) or your technical account manager for further clarification.

BeBanjo reference(s)

Application	Issue	Title
id	251	Implement consistent logout behaviour for all applications

Logout really means logout

Our applications enable you to be very productive, and we've found that it's not uncommon for our users to use multiple web browser windows and tabs to work on different content in Movida and Sequence at the same time.

For example, in one web browser window you could open two tabs for Movida and use another window in that web browser for Sequence.

When you click the **Logout** link in one of those tabs or windows you'll be returned to the login window as you'd expect, and when you try to use Movida or Sequence in one of the *other* tabs or windows (e.g. clicking a link, refreshing the page, etc.) you'll returned to the login page in that tab or window as well.

This helps in those situations where you logout of one tab or window, but forget to close or logout of the other tabs or windows you're also using for Movida and Sequence.

The new behaviour stops somebody else from using your login session to update Movida or Sequence. We've got your back.
