

Release note

Publication and Notification user interface

Release date: 10 June 2015

The Movida user interface is designed to provide you with a calm, considered, and above all understandable place to work. We aim to protect you from the complexities of the video-on-demand services that lurk beneath the surface of Movida

With this change we decided to release the **kraken** (well, one of the smaller ones...) and make some of that complexity accessible to us mere mortals.

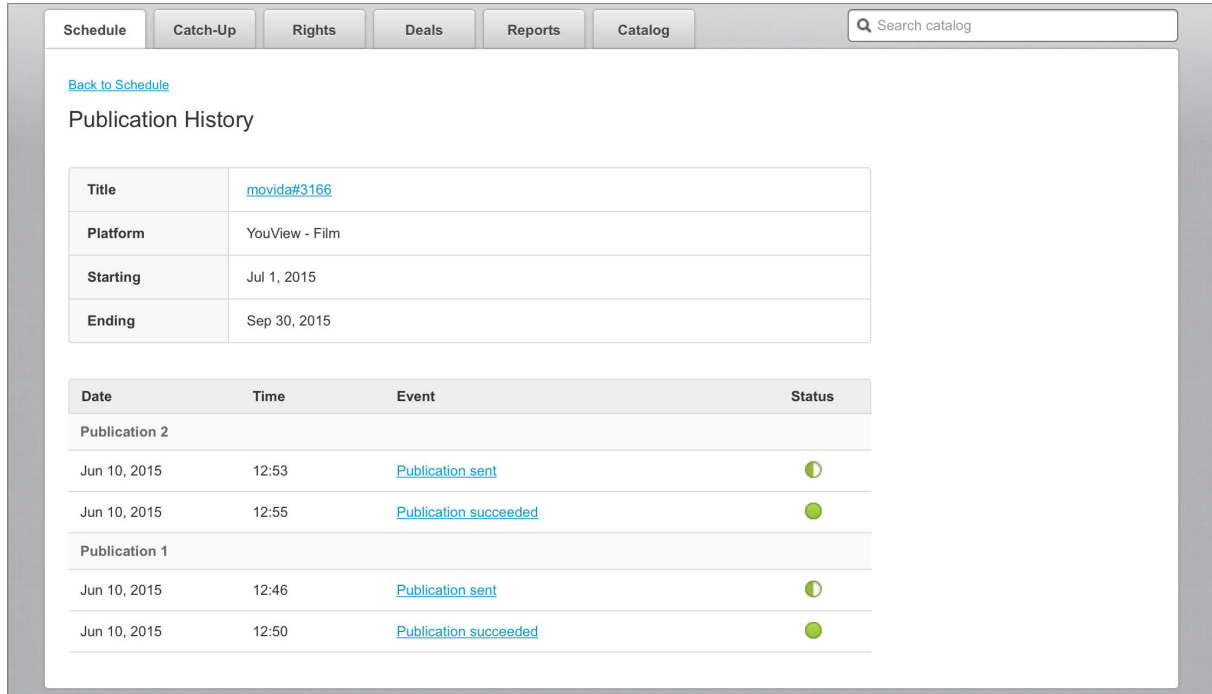

This note describes what has changed in full, and as usual you can contact **support** or your technical account manager for further clarification.

BeBanjo reference(s)

Application	Issue	Title
movida	3166	Expose publication/notification in the UI

Publication History

In the Schedule page the Publication status pop-up for a Schedule Entry shows a summary of its latest Publication (and Notification, if that feature is enabled), it now includes a **History** button that leads to the new **Publication History** page:

Back to Schedule

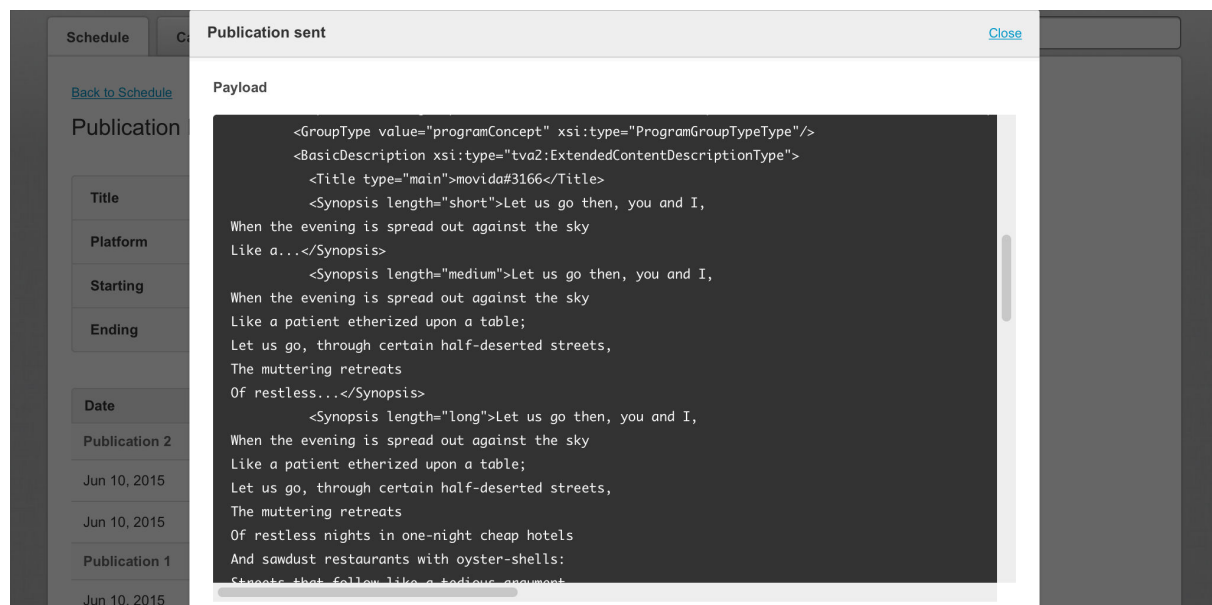

Publication History

Title	movida#3166
Platform	YouView - Film
Starting	Jul 1, 2015
Ending	Sep 30, 2015

Date	Time	Event	Status
Publication 2			
Jun 10, 2015	12:53	Publication sent	!
Jun 10, 2015	12:55	Publication succeeded	●
Publication 1			
Jun 10, 2015	12:46	Publication sent	!
Jun 10, 2015	12:50	Publication succeeded	●

The most recent Publication is shown at the top of the list and for each Publication its **events** are shown in chronological order. In the example above the Notification feature is enabled for the platform so there's a **Publication sent** and a **Publication succeeded** event for each Publication.

If you click an event you'll see either the payload sent by Movida to the platform, or the payload received from the platform (if the Notification feature is enabled). Here's an example of a Publication sent event:

Schedule | C: Publication sent [Close](#)

Payload

```
<GroupType value="programConcept" xsi:type="ProgramGroupType"/>
<BasicDescription xsi:type="tva2:ExtendedContentDescriptionType">
  <Title type="main">movida#3166</Title>
  <Synopsis length="short">Let us go then, you and I,
  When the evening is spread out against the sky
  Like a...</Synopsis>
  <Synopsis length="medium">Let us go then, you and I,
  When the evening is spread out against the sky
  Like a patient etherized upon a table;
  Let us go, through certain half-deserted streets,
  The muttering retreats
  Of restless...</Synopsis>
  <Synopsis length="long">Let us go then, you and I,
  When the evening is spread out against the sky
  Like a patient etherized upon a table;
  Let us go, through certain half-deserted streets,
  The muttering retreats
  Of restless nights in one-night cheap hotels
  And sawdust restaurants with oyster-shells:
  Streets that follow like a tedious...</Synopsis>
```

For each Publication you might also see a **Publication failed** (hopefully not very often!) or **Platform response** message and Movida will only show a maximum of twenty Platform response and Publication succeeded events (some platforms are very chatty indeed!).

Along with the details of the Payload the Publication sent event also includes messages logged when delivering the Payload. Here's an example:

Message	
Date	HTTP/1.1 100 Continue
Publication 2	HTTP/1.1 202 Accepted
Jun 10, 2015	Accept-Ranges: bytes
Jun 10, 2015	Content-Type: text/xml
Publication 1	Date: Wed, 10 Jun 2015 11:53:16 GMT
Jun 10, 2015	Location: https://ingest-ext04.ccosvc.com/ingest/transaction/669b11c3-e7fd-4774-851e-0836a04b4157
Jun 10, 2015	X-Cache: MISS from ingest-ext04.ccosvc.com
Jun 10, 2015	Content-Length: 0
Jun 10, 2015	Connection: keep-alive

And, there's one more thing! If you have the Adobe Flash Player browser plug-in installed you'll see a **copy** link for the Payload and Message sections of each event.

Unsurprisingly, clicking that link will copy the Payload or Message to the clipboard so you can paste it into another application window (e.g. an email message) *Nifty!*
