

Release note

Filter by Metadata in Schedule page

Release date: 14 September 2016

We've added the long-awaited filter by metadata to the Schedule page.

This note describes this change in full, and as usual you can contact support or your Technical Account Manager for further clarification.

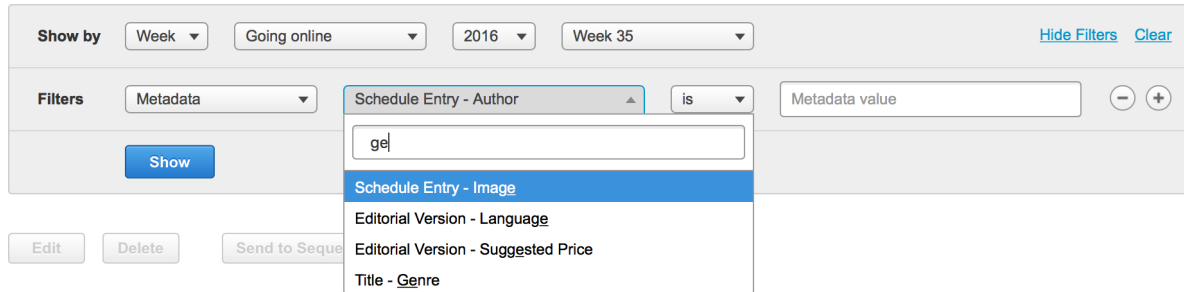

BeBanjo reference(s)

Application	Issue	Title
movida	5128	Move Elasticsearch indexing to a background job
movida	3774	Improve the mechanism for doing a full reindex in Elasticsearch
movida	4266	Filter by metadata in the schedule page
movida	5130	Extend metadata filter in the schedule page to more entities
movida	4985	Filter by multiple metadata values

The schedule metadata filter (a.k.a. "The Desired")

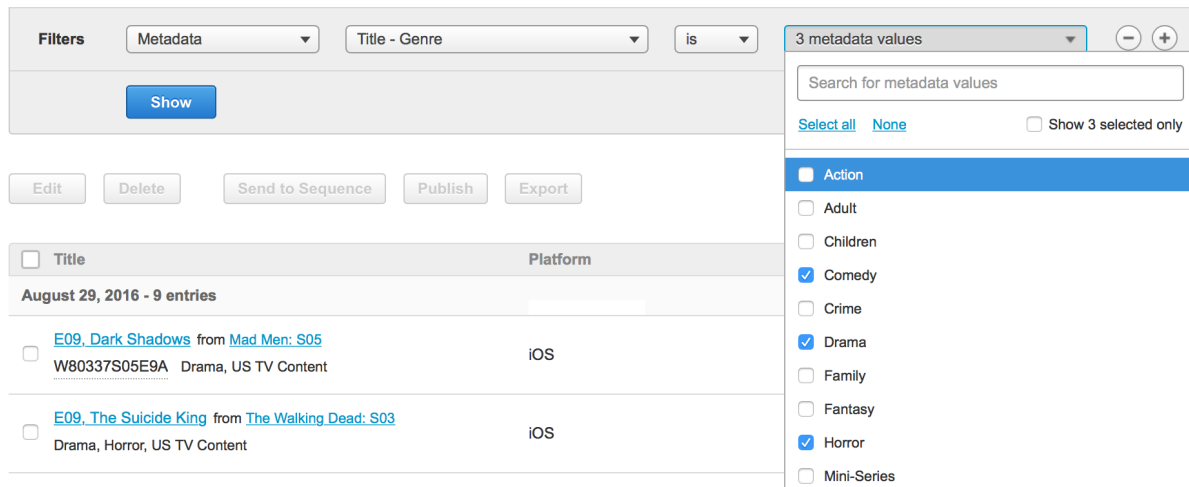

Many of our users asked about this. Multiple times! And it's finally here: you can now filter by any metadata field at Brand, Series, Collection, Title, Asset and Schedule Entry level right from the Schedule page:

Schedule Entries (60)

So, you can now see only the entries in your schedules where the Title's genre is "Drama", or where the Asset's rating is not "PG-18", or where any other metadata field has any value you want.

You can even filter by multiple values in the case of enumeration fields. For example, this is how you'll show all the Schedule Entries where the Title's genre is either "Drama", "Comedy" or "Horror":

Title	Platform
August 29, 2016 - 9 entries	
<input type="checkbox"/> E09_Dark Shadows from Mad Men: S05 W80337S05E9A Drama, US TV Content	iOS
<input type="checkbox"/> E09_The Suicide King from The Walking Dead: S03 Drama, Horror, US TV Content	iOS

We hope this feature will bring extra productivity to your workflow!
